Carbon Reduction Plan

Supplier name: ElementeX Labs Inc., incorporated in British Columbia, Canada (number BC1562512)

Publication date: 2 November 2026

Published on the company's website, elementexlabs.ca, and linked from its home page. ElementeX Labs has no UK website.

Commitment to achieving net zero

ElementeX Labs Inc. is committed to achieving net zero emissions by 2050 at the latest.

Baseline emissions footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline year: first fiscal period, 7 November 2025 (incorporation) to 31 August 2026	
Additional details relating to the baseline emissions calculations:	
This is our first carbon footprint, so our first reporting period is the baseline. It is measured from ElementeX's first-year records for the period. In that period the company had no premises, no vehicles, no employees, no revenue and no business travel; its only costs were incorporation and name request fees and internet domain registrations (CAD 434.90 in total). So every in-scope source was zero: Scope 1 (no fuel burned in owned or controlled sources); Scope 2 (no purchased electricity, heat or cooling); and the five required Scope 3 categories: 4, upstream transport and distribution (no goods bought); 5, waste generated in operations (no premises); 6, business travel (none); 7, employee commuting (no employees; the optional teleworking emissions of the director, who works from home, are not included); and 9, downstream transport and distribution (no products sold). Categories outside the required subset, such as purchased goods and services (Category 1), are not included.	
Baseline year emissions:	
Emissions	**Total (tCO2e)**
Scope 1	0.00
Scope 2	0.00
Scope 3 (included sources)	0.00
Total emissions	0.00

Current emissions reporting

Reporting year: first fiscal period, 7 November 2025 (incorporation) to 31 August 2026 (the same as the baseline; the year to 31 August 2027 is reported in the next update)	
Emissions	**Total (tCO2e)**
Scope 1	0.00
Scope 2	0.00
Scope 3 (included sources)	0.00
Total emissions	0.00

Emissions reduction targets

Our baseline for the reported scopes is zero, so a percentage reduction cannot be set against it. To keep our progress towards net zero, we have adopted the following targets for the next five years, to the year ending 31 August 2031:

1. Keep Scope 1 and Scope 2 emissions at zero by working without company premises, vehicles or fuel use; if we take on premises, we buy electricity on a renewable tariff.
2. Keep the five reported Scope 3 categories below 1 tCO2e a year in total, by delivering contracts remotely by default and choosing rail over air for any travel a client requires.
3. From the year ending 31 August 2027, measure and report Category 1 (purchased goods and services, including cloud computing and software) as an extra category, and set a reduction target for it once a full year is measured.

Carbon reduction projects

Completed carbon reduction initiatives

The following measures have been in place since the company was formed in November 2025, and they will be in effect when performing the contract. They kept the company's reported emissions at zero in its first period; no reduction is claimed against the baseline, which is itself zero.

No company premises and no company vehicles. All meetings are held online and files are exchanged electronically. Deliverables are digital and designed to be read on screen, so nothing is printed for delivery.

Future carbon reduction initiatives

In the future we will keep a travel log with distance and mode for any business travel, so Category 6 is measured, not estimated; measure Category 1 from the year ending 31 August 2027; prefer cloud regions and suppliers that publish renewable electricity commitments, and record which ones we use; and update and republish this plan at least once a year.

Declaration and sign off

This Carbon Reduction Plan has been completed in accordance with PPN 006 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard[1]. No emission conversion factors were needed for this first period, because no in-scope activity took place; later periods use the UK government emission conversion factors for greenhouse gas company reporting[2].

SECR requirements do not apply to ElementeX Labs Inc., which is incorporated in British Columbia, Canada. The required subset of Scope 3 emissions has been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard[3].

This Carbon Reduction Plan has been reviewed and approved by the board of directors of ElementeX Labs Inc. (its sole director) on 2 November 2026.

Signed on behalf of the supplier:

Amir Daneshpajouh, Director, ElementeX Labs Inc. Signed electronically on 2 November 2026.
